# Who We Are

## History

Hapco has a long history dating to 1843 when its parent corporation, Hubbard and Company, originated as a national manufacturer of forgings and stampings to the utility industry. A major contributor to the emerging telephone and power industries of the late 19th century, their commitment to *"offering products of the highest quality at ever-increasing service levels"* established Hubbard as the leading company in these growing fields.

In 1951, Hubbard established a new division, the Hubbard Aluminum Products Company (*HAPCO*), and offered its first line of aluminum lighting poles and brackets in August of that same year. The superior properties of aluminum poles were immediately embraced by the market, with Hapco seeing significant growth during these early years.

Hapco was acquired by our current owner Dyson-Kissner-Moran (*DKM*) in 1958, and the original Pittsburg, Pennsylvania facility was moved to our present-day location in Abingdon, Virginia in 1962. Today, after over 50 years and multiple plant expansions, our skilled workforce continues to vigorously pursue our founder's original commitment of *"the highest quality"* products in the pole products industry.

## Engineering Excellence

*"By adopting the latest methods of...fabrication combined with expert engineering knowledge of the many alloys of aluminum and their properties, Hapco Products are maintained at the highest level of quality."*

*Hapco Product Catalog Number 60, 1955*

As a manufacturer forging the way in aluminum pole production for over 60 years, Hapco is at its core a company with a passion for excellence in innovation and product quality. The formula for this success hasn't changed since 1955, as the statement above is as true about Hapco today as it was then. *"Engineering Knowledge"* has been instrumental in carrying Hapco from an industry pioneer to today's recognized leader in the aluminum pole industry.

Our advanced technical skill and in-depth aluminum metallurgical knowledge is unequaled, earning Hapco a respected reputation for both our design capabilities and product quality. Our hundreds of combined years of engineering experience are focused on Hapco's *"Better By Design"* pledge, and the results of our commitment to excellence can be seen in our exclusive Lifetime Warranty.

*See Pages 8-9 for additional information on Hapco's Lifetime Pole Assembly Warranty.*

## Manufacturing Expertise

Hapco's entry into aluminum pole products manufacturing was undertaken with a simple philosophy...to provide our customers superior street and area lighting products through the investment and implementation of the most advanced machinery and manufacturing processes of the day. This philosophy led to several firsts in the market, including one-piece aluminum poles in lengths to 40' and the use of automatic ovens for accurate regulation of the heat treat cycle.

Today, this *"Best-in-Class Manufacturing"* mentality continues with the most advanced, state-of-the-art aluminum manufacturing technologies incorporated into our 275,000 square foot facility. Decades of experience are combined with automated on-site powder paint facilities, on-site fluting, dedicated custom lines and a full embracement of the principles of Lean Manufacturing.

After over six decades our manufacturing expertise continues to produce products of the highest quality, earning Hapco a respected reputation for excellence and making Hapco one of the most recognized...and specified... names in the light pole industry.

## Why We Do It Well

### Dedicated Research and Development

Hapco has a proud history of dedicated involvement in the research that shaped the industry, with decades of active participation in organizations such as The Aluminum Association, the National Electrical Manufacturers Association (*NEMA*), the National Cooperative Highway Research Program (*NCHRP*), and the American Association of State and Highway Transportation Officials (*AASHTO*). This background and experience provides the solid foundation for our leading Research and Development program.

Hapco's commitment to R&D can be observed in our fully-equipped, in-house R&D labs and testing facilities. In addition, Hapco has an on-site crash test pendulum that provides the means to test full-scale poles and brackets at our Abingdon, VA campus. Thousands of tests have been conducted through the years in the interest of product improvement and safety, playing a major role in earning Hapco the reputation of providing the highest quality aluminum pole products.

This dedication to in-house testing, combined with extensive research projects performed in collaboration with accredited university testing labs, have led to many industry-recognized contributions to aluminum pole development. Hapco initiated the first wind tunnel testing to insure more efficient product designs, and our early work on vibration control and breakaway safety led to the first industry patents awarded in these categories.

### Quality Assurance

To assure the highest quality products, Hapco poles are structurally designed to stringent specifications that meet or exceed American Association of State Highway & Transportation Officials (*AASHTO*) standards. Not all manufacturers design to *AASHTO*, which is conservative by nature, assuring that Hapco designs are the safest, highest quality and longest lasting available in the industry.

Fully embracing our Quality Assurance System begins with strict raw material specifications. Round Aluminum shafts are constructed of seamless aluminum alloys conforming to American Society for Testing and Materials (*ASTM*). Shaft tolerances are 50-60% tighter than industry accepted standards, leading to greater efficiencies in the manufacturing process and unequaled finished product quality. Required welding is performed by American Welding Society (*AWS*) / Canadian Welding Bureau (*CWB*) certified welders to AWS Specification D1.2 or CWB Specification W 47.2 standards. All light pole shafts are heat treated after base weld to a full T6 temper in computer controlled ovens certified to meet the requirements of *ASTM B597* and *Mil-H-6088* specifications.

In addition, all component parts meet applicable *ASTM* standards. Components follow a strict initial standard inspection process, followed by a first and fifth piece inspection at each step of the manufacturing process. A final inspection of finished products ensures a level of quality only available with Hapco.

### Custom Capabilities

No one can duplicate Hapco's ability to deliver solutions to design professionals and project owners looking for that truly custom or unique design. Long recognized as the leader in providing innovative light poles and brackets, our team of engineers stand ready with the technical competence and experience to assist on even the most complex project.

Expert engineering design, world-class manufacturing capabilities, and an emphasis on quality control make Hapco the perfect choice for your next custom project.

### Vertical Integration

In 2008, Hapco's parent company, Dyson-Kissner-Moran (*DKM*), purchased a leading extrusion company located only 20 miles from our Abingdon, VA facility. This vertical integration strengthens our ability to support industry leading service levels for today's tight project schedules. Material certification requirements are substantially tighter than industry standards, ensuring a continuous flow of quality extruded aluminum tubing to Hapco.

# Advantages of Aluminum Poles

## Why Aluminum?

The superior properties of aluminum make it both the perfect choice and best value for outdoor lighting poles and brackets.

## Corrosion Resistant

On contact with air, aluminum forms a protective layer of aluminum oxide that guards against corrosion. This natural resistance to corrosion ensures that your aluminum lighting pole will resist the ravages of time, temperature and humidity while providing years of low maintenance care.

## Lightweight

Aluminum provides the perfect combination of lightweight material with high strength-to-weight ratios. At one-third the weight of steel, aluminum poles are much easier to handle and install, providing substantial installation savings in both labor and equipment.

## Proven Performance

Hapco has been manufacturing quality Aluminum Pole Products for more than 60 years, with many of the original installations still in service with no structural issues or noticeable differences in appearance.

The longevity and durability of our products can be validated with our industry-leading

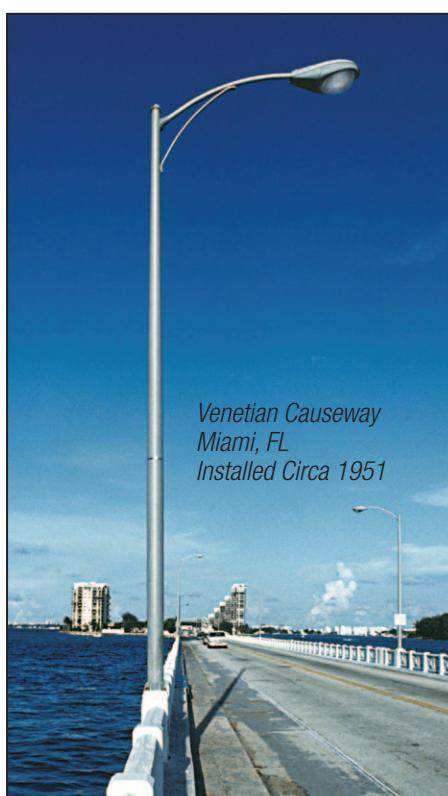

**Lifetime Warranty** on aluminum pole assemblies (see Pages 8-9).

## Lower Overall Cost of Ownership

The properties of aluminum make it a tremendous value when the overall cost of ownership is considered. Higher installation and maintenance costs for aluminum alternatives, combined with guaranteed replacement costs of shorter lifecycle materials, contribute to aluminum having the lowest cost of ownership of any lighting pole option.

## The “Green” Choice

Aluminum provides an environmentally responsible choice of material and approach within the burgeoning green movement. Aluminum is the most abundant mineral in the earth's crust, reduces material replacement energy by its incredibly long life cycle, and is 100% recyclable.

## Advantages of Aluminum

*When compared to alternative materials, the advantages of aluminum are substantial.*

### Steel

- Steel is not corrosion resistant and will begin to deteriorate as soon as it is installed, allowing visible rust and corrosion which lead to higher maintenance costs.
- Inherently shorter lifecycles contribute to an overall higher cost of ownership when compared to aluminum.
- Weighs three times as much as aluminum.
- Limited recycle value.
- Should not be Direct Buried.

### Composite

- Composite poles are affected by ultraviolet fading and fiber blooming, quickly leading to poor aesthetics in many environments.
- Can be damaged by mowing or trimming. Round aluminum poles are heat treated after base weld to a full T6 temper, giving superior resistance to cuts and abrasions from trimmer and mowers.
- No recycle value, making them difficult and expensive to dispose of in case of pole knockdowns.
- Expensive maintenance costs associated with repainting and replacement.
- Excessive deflection of the top of poles with many arm/luminaire combinations.
- Limited breakaway designs.

### Concrete

- Concrete is much heavier than Aluminum, resulting in significantly higher shipping and labor costs.
- Product Weight Comparison -
  - 25' Mounting Height  
Aluminum pole = 140 lbs.  
Concrete Pole = 1100 lbs.
- Slower, less efficient installations translate into extended job completion times.
- Difficult to install, requiring expensive installation equipment and larger installation crews.
- No breakaway performance, making concrete more hazardous in regards to highway safety than other pole materials.
- Susceptible to spalling (crumbling), staining and fading.
- No recycle value.

## Direct Buried Applications

The advantages of aluminum poles make them the perfect option for direct buried applications. With a 60 year record of successful installations throughout the country, **Hapco Aluminum Direct Buried Poles** provide industry professionals with significant overall job savings.

### Direct Buried Advantages

- Provides faster, more cost efficient installations.
- Eliminates foundations, removing the associated costs and the possibility of improper pouring/setting.
- Eliminates the need for bolt circle templates and anchor bolts.
- Eliminates the use of shims or double nuts for leveling.
- Eliminates improper bolt projections that result in uneven base covers and grouting.
- Eliminates the possibility of foundation and anchor bolt replacement in the event of a knockdown.
- Reduces the risk of wind induced vibration due to the ground acting as a natural damper.
- Provides more strength, lending greater EPA values than anchor base designs due to the elimination of the weld joint.
- Improves Aesthetics.
- Exclusive Hapco Lifetime Warranty which includes corrosion (see Lifetime Warranty – Pages 8-9).

## Hapco Aluminum and LED Lighting

# "Complete" Specification

### Hapco Aluminum + LED Lighting

#### The "Total Sustainable Assembly"

- Longevity
- Near-Zero Maintenance
- Lower Overall Cost of Ownership

Why erode the benefits of **LED Lighting** with high-maintenance lighting poles that have shorter life-cycles and are inherently less aesthetic than aluminum?

A completed assembly containing **LED Fixtures** and **Hapco Aluminum Poles** guarantee project owners the proven performance, longevity and superior aesthetics of aluminum with the **Specification Advantages** and **Lifetime Warranty** that can only be delivered by Hapco.

**Aluminum is the "LED" of Lighting Poles!**

## Breakaway Solutions

### HAPCO Leads the Industry in Federal Highway Administration (FHWA) Accepted Breakaway Options.

The Federal Highway Administration (*FHWA*) definition of "Breakaway" refers to crash-tested devices that break or yield upon impact. FHWA guidelines require the specification of Breakaway poles and bases meeting rigorous impact testing to mitigate the potential severity of crashes, providing a safer outcome in the event of a collision.

The FHWA accepts certain poles and bases for use on breakaway applications under provisions adopted from the American Association of State and Highway Transportation Officials' (*AASHTO*) *Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals*. Testing parameters used in determining acceptable breakaway performance are found in the National Cooperative Highway Research Program (*NCHRP*) *Report 350, Recommended Procedures for the Safety Performance Evaluation of Highway Features*.

### Lifetime Warranty

Aluminum pole assemblies incorporating FHWA Accepted Breakaway Devices are covered under Hapco's exclusive Lifetime Warranty. See Pages 8-9 *Lifetime Pole Assembly Warranty* for more information.

### 4-Bolt Breakaway Anchor Base

Hapco's Anchor Base was the first pole anchoring shoe base allowing standard installation techniques to meet FHWA Breakaway provisions. Its simplicity of design eases the installation process, combining the most cost efficient Breakaway device in the industry with the aesthetic appeal of a standard shoe base.

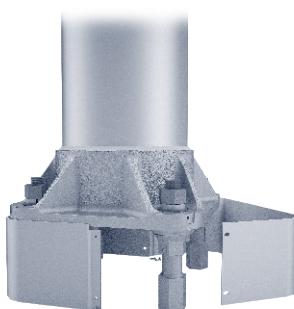

### Breakaway T-Base

Hapco offers Transformer Base (*T-Base*) designs to accommodate a wide range of pole sizes and bolt circle requirements (see Page 157). The historic appearance of the T-Base design offers a higher probability of re-use of the pole in the event of a knockdown.

### X-Base

The X-Base, a Hapco exclusive, is welded to the bottom of the base as part of the pole assembly. It is supplied assembled and serves as the base flange, bolting directly to the anchor bolts. The X-Base extends the range of sizes for FHWA accepted Breakaway poles to a 10" Butt Diameter and 55' Mounting Heights.

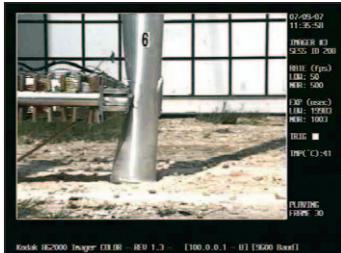

### Breakaway Couplings

Breakaway couplings are available for use in a wide range of pole sizes.

## Hapco is proud to offer the industry's first FHWA Accepted Direct Buried Breakaway Aluminum Pole.

Aluminum poles used in direct buried applications throughout the country have a 60 year record of successful installations and can provide significant overall job savings.

Through an extensive process of expert design, modeling, and testing, Hapco engineers have created a breakaway design that brings the cost efficient properties of direct buried poles to our FHWA accepted Breakaway product line.

The butt end of Hapco Direct Buried Breakaway poles are partially flattened into an anti-rotational, oval cross section.

### Direct Buried Advantages

- Provides faster, more cost efficient installations.
- Eliminates foundations, removing the associated costs and the possibility of improper pouring/setting.
- Eliminates the need for bolt circle templates and anchor bolts.
- Eliminates the use of shims or double nuts for leveling.

# Design Considerations & Applications

## Hapco has been the nation's leading aluminum pole producer for more than 60 years.

Hapco achieved and maintained this position with expert engineering, manufacturing innovation, and pole product testing. We have a proud history of dedicated involvement in the research that has shaped our industry, leading to many industry patents which include the first patent on a successful pole vibration damper.

Hapco has an in-house testing facility that provides a means to test full-scale poles and brackets under static and cyclic load conditions. Thousands of tests have been conducted in the interest of product improvement. These tests, extensive research projects in collaboration with major universities, and current design specifications provide the basis for Hapco's design criteria.

Hapco can provide designs based on the American Association of State Highway and Transportation Officials Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals (*otherwise known as the AASHTO-LTS*) and local building code requirements. Poles in this catalog are designed to meet the strength requirements of 2009 AASHTO LTS-5. Please advise Hapco of any additional requirements you may have.

## Design Efficiency

Efficiency of design can lead to significant overall cost savings. In order to manage project funds efficiently, it is important to utilize materials accurately, and Hapco has the knowledge and experience to provide the most efficient offering for each pole project. There are four main factors to consider when selecting the proper pole.

- 1. Mounting Height:** Illumination levels determine the luminaire and mounting height selection process.
- 2. Total Weight:** The combined weight of any object that will be mounted on the pole (luminaires, arms, brackets, accessories, etc.).
- 3. Total EPA:** Effective Projected Area (*EPA*) is the product of the actual area seen by the wind multiplied by the appropriate drag coefficient and is dependent upon the angle of the wind with respect to the item being considered.
- 4. Wind Velocity:** Location-specific, 3-second gust basic wind speed as presented in this section.

## Methods of Analysis and Loading Due to Wind and Other Forces

The stresses caused by all pole attachments exist continuously throughout the life of the installation. These stresses are subject to fluctuation caused by the aerodynamics of the luminaire or other characteristics of the assembly, due to wind loads. Therefore, these stresses must be limited to a conservative value to reduce the possibility of fatigue. Other loads that should be considered are those produced by ice, overhead wiring (*must be treated as a special loading challenge*), and future changes to the original design. The forces anticipated in a particular installation must be known in order to select the correct pole.

## Shielding Factor

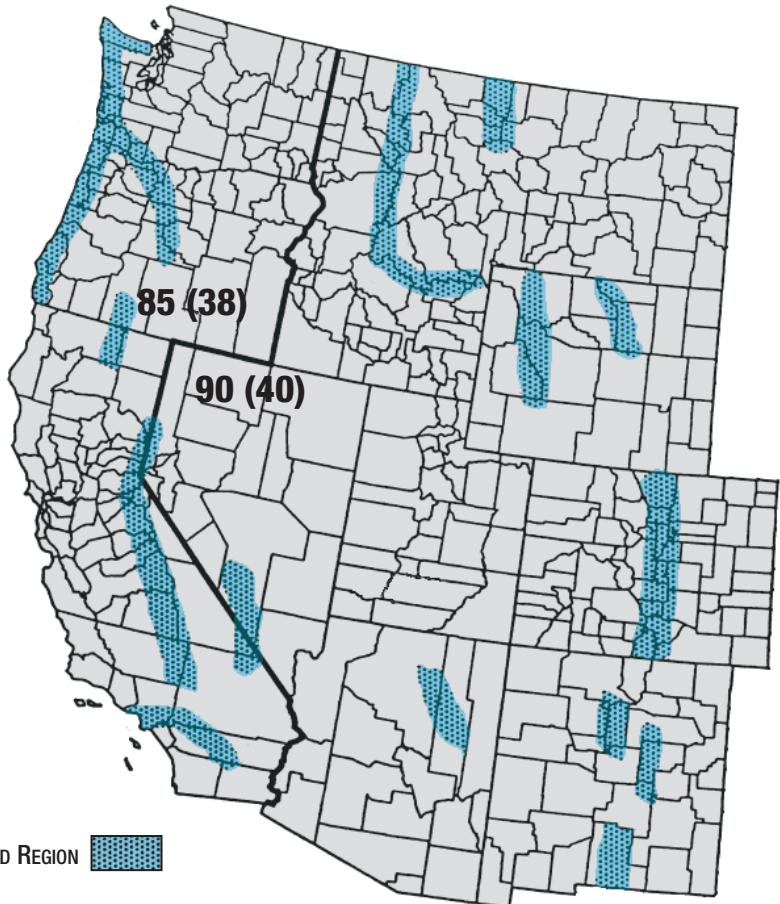

The table shown at right will assist you in calculating the total EPA for many of the popular luminaire configurations. Using the shielding factor to calculate total EPA prevents an over-designed pole being used, resulting in cost savings.

Pole designs typically constitute an analysis of the combined stresses caused by the various types of loads. Our engineers evaluate each pole configuration and determine the stress that is permissible according to the design code, and the recommended loads are limited to stay within that allowable stress value.

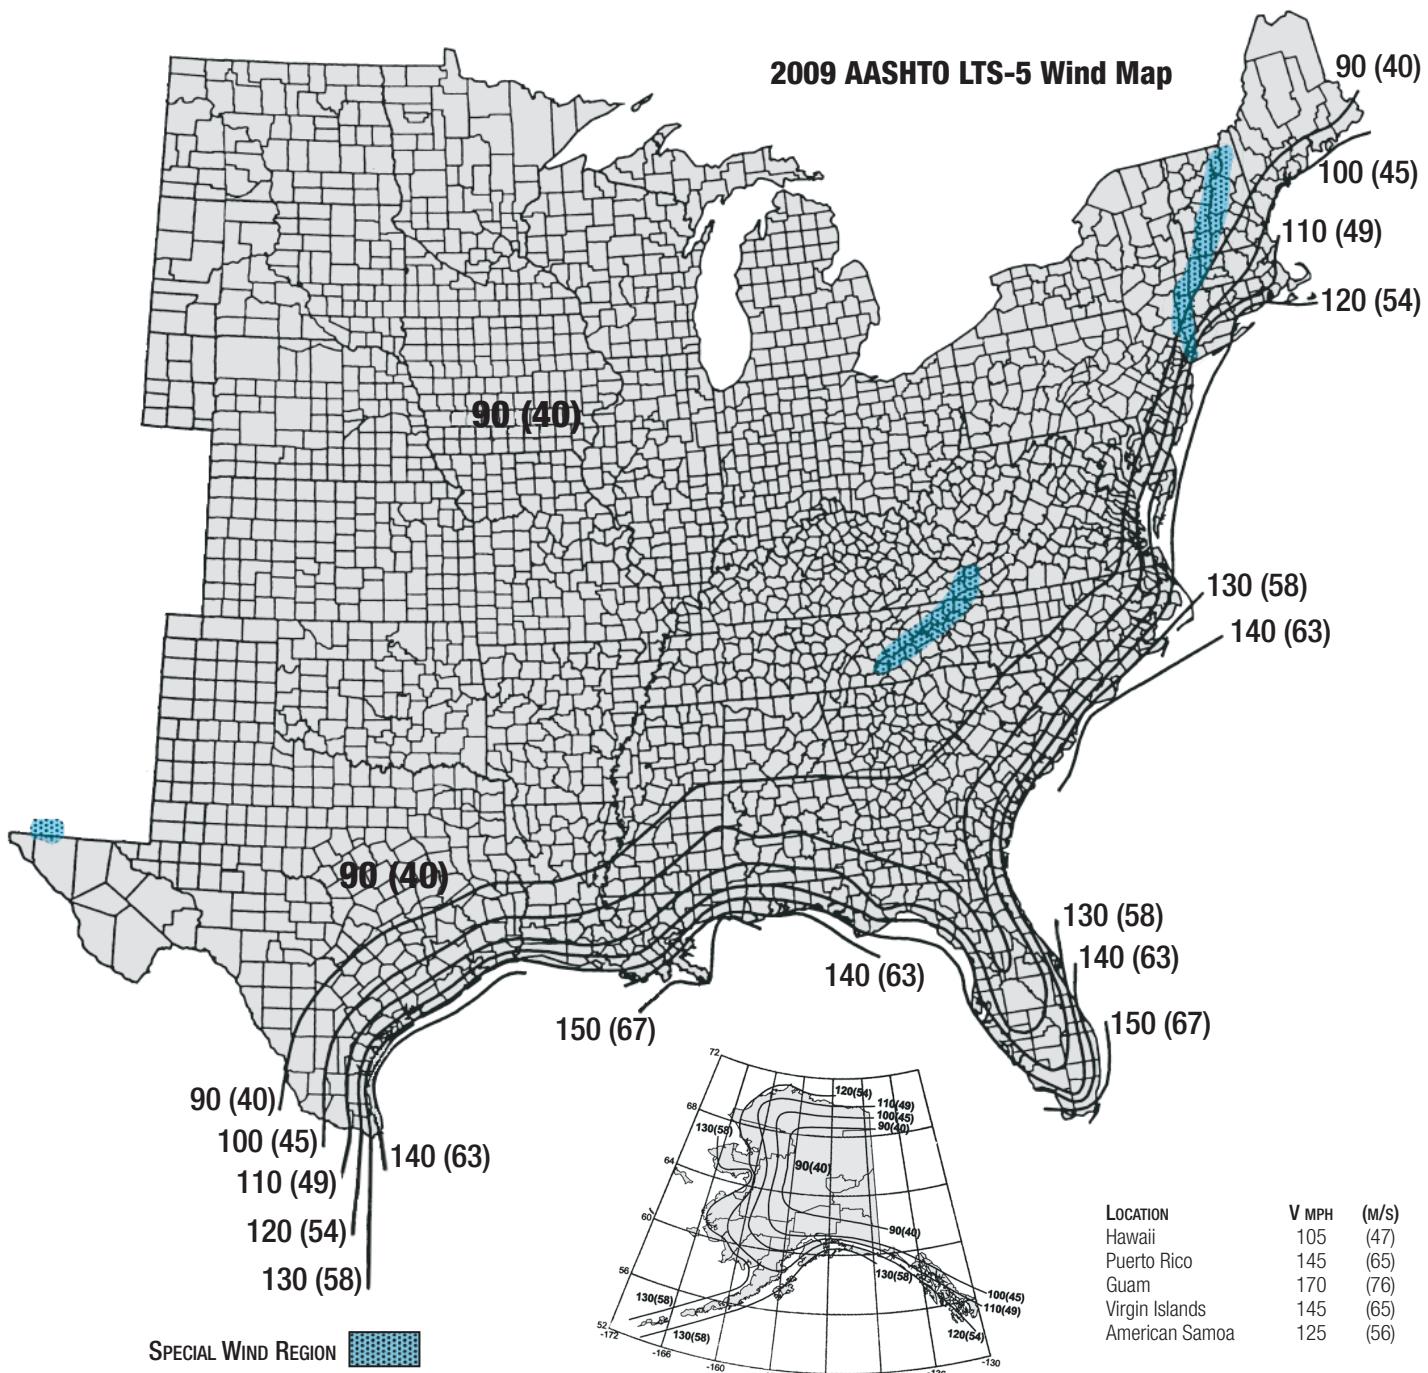

Stiffness considerations are included in the analysis of a Hapco pole. The dead load deflection of the shaft is limited to provide an attractive appearance. The allowable deflection is based on the angular deflection, or rotation, of the shaft top, which is the characteristic that is the best measure of appearance for this type of loading.

| LUMINAIRE CONFIGURATION | EPA | SHIELDING FACTOR | TOTAL EPA                |
|-------------------------|-----|------------------|--------------------------|

## Wind Velocity Selection

### Wind Velocity Selection

2009 AASHTO LTS-5 specification 3-second gust basic wind speeds (*mph*) with gust effect factor (*G*) of 1.14 and 25 year design life wind map (*ASCE 7-05*) is shown above. This wind map should be used to determine wind velocity for your specific location. If you are located between two different velocity isolach lines, the higher velocity should be used.

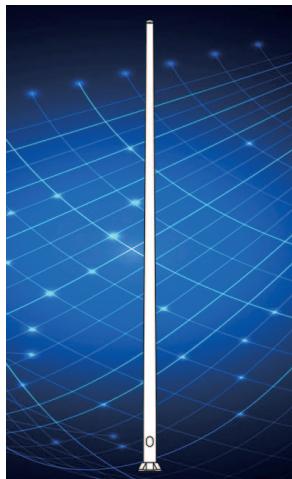

Hapco has learned from years of experience that there are local isolated high wind conditions that can be devastating to poles and luminaires not designed for such conditions.

Additionally, constant winds in the 10-25 mph range can severely damage certain poles and luminaires by vibration. Vibration is a local, site specific condition that should not be overlooked when selecting a pole. Destructive vibration is NOT an indication of substandard material, workmanship, or pole design. Please advise Hapco of any unusual wind conditions prior to purchase of poles. More robust poles and/or vibration dampers may be necessary to avoid wind damage.

Pole failures as a result of wind induced vibration are NOT covered under manufacturer's warranty. Please reference "**LIFETIME WARRANTY**" (pages 8-9) and "**WIND-INDUCED VIBRATION**" (pages 150-151) for Hapco's policy regarding vibration.

# Finishes

## Satin Aluminum Finish

Hapco's Satin Aluminum is a polished aluminum finish achieved in a multi-pass, mechanical rotary sanding operation. No alternative finish option offers a lower overall cost of ownership or longer aesthetic beauty, making it the industry's first choice for low-maintenance and enduring finishes.

01 – Satin Aluminum Finish – Round Poles

02 – Satin Aluminum Finish – Square Poles

Hapco's RTA and RSA round aluminum poles are constructed of Aluminum Alloy 6063. This marine grade alloy is composed primarily of Aluminum, Magnesium and Silicon and is chosen because of its superior attributes and extremely high resistance to corrosion. On contact with air, these aluminum alloys naturally oxidize, creating a layer of aluminum oxide on the surface of the pole that effectively and permanently guards against corrosion.

## Thermoset Powder Coat Finishes

Hapco's on-site, state-of-the-art powder coating operations utilize weather resistant triglycidyl isocyanurate (TGIC) polyester thermoset powders that are electrostatically applied, oven cured and bonded to a minimum dry film thickness of 2.0 mils. The National Association of Architectural Metal Manufacturers, *Metal Finishes Manual*, rate the outdoor life of these powders at 15 plus years.

### AAMA 2604

All polyester thermoset powders are not created equal. The American Architectural Manufacturers Association (AAMA) provides classifications for powder coatings which are industry recognized standards for testing and performance. AAMA 2604 coatings, known as Super Durable, are formulated with advanced polyester resin technology that utilizes higher performance pigments. Qualities include superior gloss, color retention and weathering capabilities, better exterior durability and UV resistance, and highly resistant scratching, chipping and peeling characteristics.

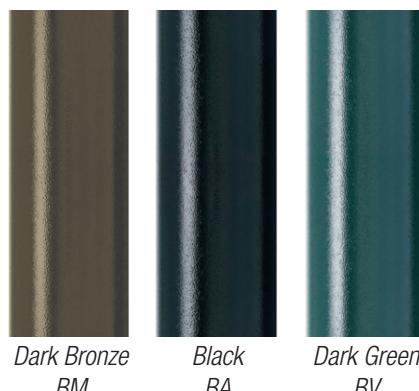

AAMA specifications for the testing and evaluation of coatings use a South Florida (*27° Latitude*) benchmark due to its extreme weather conditions. Testing categories for AAMA 2604 acceptance include a 5-year 45° Sun Exposure, 3000 Hour Humidity Resistance, and 3000 Hour Salt Spray. AAMA 2604 powders are rated to withstand outdoor exposure for five (5) years in this worst case environment. In comparison, some competitors use AAMA 2603 coatings. AAMA 2603 products are rated for only one (1) year.

Hapco only uses AAMA 2604 powders, assuring project owners the longest lasting, lowest maintenance powder painted products available in the market today.

### Hapco's use of AAMA 2604 Powders Reduces Overall Ownership Cost By Providing Longer Lasting Aesthetics.

#### Standard Colors

Hapco standard powder coat colors are provided in a textured design for improved mar resistance.

## RAL and Custom Colors

Along with our standard colors, Hapco can provide both RAL and custom colors. Options are unlimited. Simply provide any RAL Color Number or Color Chip Sample and Hapco will provide the perfect AAMA 2604 Powder Paint Color for your next project.

## Powder Coat 5-Year Finish Warranty

Hapco warrants its factory-applied powder coatings against cracking, peeling or excessive fading due to normal climatic exposure for a period of five (5) years from the date of shipment. Damage to the finish coating caused by mechanical abuse, such as rough handling during installation or by vandalism, is not covered by this warranty. This warranty is limited to, at the seller's option, the repair or replacement of the material involved and shall not include reimbursement of consequential expenses such as installation, removal of equipment, or transportation costs.

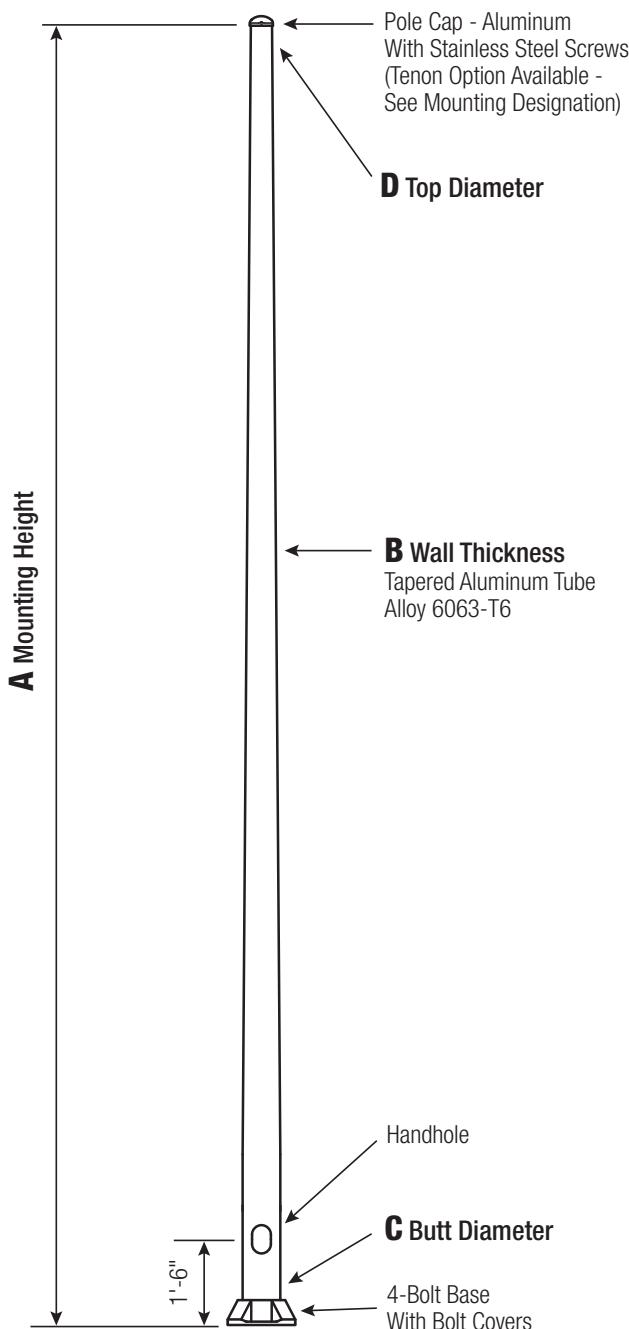

## Anodized Finish

Anodized colors are limited to clear, black and various shades of bronze.

#### Color Uniformity

While a color finish on aluminum poles can be obtained by either anodizing or powder painting, anodizing of pole assemblies will inherently result in color variations and color uniformity is not guaranteed. Variations in the physical or chemical composition of the metals contained in the base flange, pole shaft, welds, and pole accessories create color variations in anodized finishes that are unavoidable. Color variations in anodized finishes are not covered under Hapco warranty.

*Powder Coat finishes offer a more attractive price and lead time compared to anodized products and are recommended for guaranteed uniformity of color.*

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**Pole**

Shaft and arm will be constructed of seamless extruded tube of 6063 Aluminum Alloy per the requirements of ASTM B221. The shaft assembly shall be full-length heat treated to produce a T6 temper.

**Handhole**

**6" Butt Diameter** - Reinforced, 3" x 5" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. A Grounding Provision incorporating a 3/8" diameter hole is provided opposite the Handhole.

**7"+ Butt Diameters** - Reinforced, 4" x 6" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. Reinforced Frame will contain a tapped 3/8"-16NC Grounding Provision.

**Embed Detail**

Direct Buried Pole bottom section on 6"+ butt diameter poles will be partially flattened into an anti-rotational, oval cross section. Wire access will be provided 24" below ground line. Soil conditions vary by site. Foundation requirements should be determined by a qualified Structural Engineer with knowledge of jobsite soil conditions.

**Vibration Damper**

When determined necessary by Hapco, a Vibration Damper will be factory-installed inside the pole shaft. Customer specification of the damper is available.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

C and D Dimensions in Inches

**Pole**  
Shaft and arms will be constructed of seamless extruded tube of 6063 Aluminum Alloy per the requirements of ASTM B221. The shaft assembly shall be full-length heat treated to produce a T6 temper.

### Handhole

**6" Butt Diameter** - Reinforced, 3" x 5" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. A Grounding Provision incorporating a 3/8" diameter hole is provided opposite the Handhole.

**7"+ Butt Diameters** - Reinforced, 4" x 6" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. Reinforced Frame will contain a tapped 3/8"-16NC Grounding Provision.

### Embed Detail

Direct Buried Pole bottom section on 6"+ butt diameter poles will be partially flattened into an anti-rotational, oval cross section. Wire access will be provided 24" below ground line. Soil conditions vary by site. Foundation requirements should be determined by a qualified Structural Engineer with knowledge of jobsite soil conditions.

### Vibration Damper

When determined necessary by Hapco, a Vibration Damper will be factory-installed inside the pole shaft. Customer specification of the damper is available.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

C and D Dimensions in Inches

**Pole**

Shaft and arms will be constructed of seamless extruded tube of 6063 Aluminum Alloy per the requirements of ASTM B221. The shaft assembly shall be full-length heat treated to produce a T6 temper.

**Handhole**

**7"+ Butt Diameters -**  
Reinforced, 4" x 6" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. Reinforced Frame will contain a tapped 3/8"-16NC Grounding Provision.

**Embed Detail**

Direct Buried Pole bottom section on 6"+ butt diameter poles will be partially flattened into an anti-rotational, oval cross section. Wire access will be provided 24" below ground line. Soil conditions vary by site. Foundation requirements should be determined by a qualified Structural Engineer with knowledge of jobsite soil conditions.

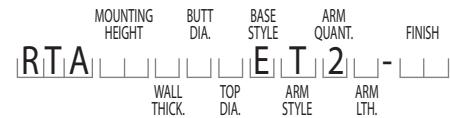

**Vibration Damper**

When determined necessary by Hapco, a Vibration Damper will be factory-installed inside the pole shaft. Customer specification of the damper is available.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. C and D Dimensions in Inches

**Pole**

Shaft and arm will be constructed of seamless extruded tube of 6063 Aluminum Alloy per the requirements of ASTM B221. The shaft assembly shall be full-length heat treated to produce a T6 temper.

**Handhole**

**6" Butt Diameter** - Reinforced, 3" x 5" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. A Grounding Provision incorporating a 3/8" diameter hole is provided opposite the Handhole.

**7"+ Butt Diameters** - Reinforced, 4" x 6" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. Reinforced Frame will contain a tapped 3/8"-16NC Grounding Provision.

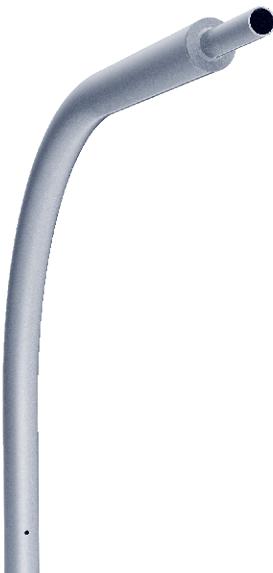

**Embed Detail**

Direct Buried Pole bottom section on 6"+ butt diameter poles will be partially flattened into an anti-rotational, oval cross section. Wire access will be provided 24" below ground line. Soil conditions vary by site. Foundation requirements should be determined by a qualified Structural Engineer with knowledge of jobsite soil conditions.

**Vibration Damper**

When determined necessary by Hapco, a Vibration Damper will be factory-installed inside the pole shaft. Customer specification of the damper is available.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

C and D Dimensions in Inches

**Pole**  
Shaft and arms will be constructed of seamless extruded tube of 6063 Aluminum Alloy per the requirements of ASTM B221. The shaft assembly shall be full-length heat treated to produce a T6 temper.

**Handhole**

**6" Butt Diameter** - Reinforced, 3" x 5" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. A Grounding Provision incorporating a 3/8" diameter hole is provided opposite the Handhole.

**7"+ Butt Diameters** - Reinforced, 4" x 6" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. Reinforced Frame will contain a tapped 3/8"-16NC Grounding Provision.

**Embed Detail**

Direct Buried Pole bottom section on 6"+ butt diameter poles will be partially flattened into an anti-rotational, oval cross section. Wire access will be provided 24" below ground line. Soil conditions vary by site. Foundation requirements should be determined by a qualified Structural Engineer with knowledge of jobsite soil conditions.

**Vibration Damper**

When determined necessary by Hapco, a Vibration Damper will be factory-installed inside the pole shaft. Customer specification of the damper is available.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**Pole**

Shaft and arm will be constructed of seamless extruded tube of 6063 Aluminum Alloy per the requirements of ASTM B221. The shaft assembly shall be full-length heat treated to produce a T6 temper.

**Handhole**

**6" Butt Diameter** - Reinforced, 3" x 5" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. A Grounding Provision incorporating a 3/8" diameter hole is provided opposite the Handhole.

**7"+ Butt Diameters** - Reinforced, 4" x 6" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. Reinforced Frame will contain a tapped 3/8"-16NC Grounding Provision.

**Embed Detail**

Direct Buried Pole bottom section on 6"+ butt diameter poles will be partially flattened into an anti-rotational, oval cross section. Wire access will be provided 24" below ground line. Soil conditions vary by site. Foundation requirements should be determined by a qualified Structural Engineer with knowledge of jobsite soil conditions.

**Vibration Damper**

When determined necessary by Hapco, a Vibration Damper will be factory-installed inside the pole shaft. Customer specification of the damper is available.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

C and D Dimensions in Inches

**Pole**

Shaft and arm will be constructed of seamless extruded tube of 6063 Aluminum Alloy per the requirements of ASTM B221. The shaft assembly shall be full-length heat treated to produce a T6 temper.

**Handhole**

**6" Butt Diameter** - Reinforced, 3" x 5" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. A Grounding Provision incorporating a 3/8" diameter hole is provided opposite the Handhole.

**7"+ Butt Diameters** - Reinforced, 4" x 6" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. Reinforced Frame will contain a tapped 3/8"-16NC Grounding Provision.

**Embed Detail**

Direct Buried Pole bottom section on 6"+ butt diameter poles will be partially flattened into an anti-rotational, oval cross section. Wire access will be provided 24" below ground line. Soil conditions vary by site. Foundation requirements should be determined by a qualified Structural Engineer with knowledge of jobsite soil conditions.

**Vibration Damper**

When determined necessary by Hapco, a Vibration Damper will be factory-installed inside the pole shaft. Customer specification of the damper is available.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

### Pole

Shaft and arm will be constructed of seamless extruded tube of 6063 Aluminum Alloy per the requirements of ASTM B221. The shaft assembly shall be full-length heat treated to produce a T6 temper.

### Handhole

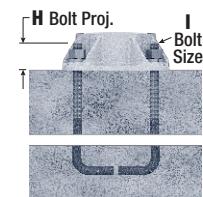

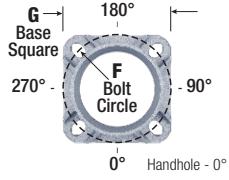

**6" Butt Diameter** - Reinforced, 3" x 5" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. A Grounding Provision incorporating a 3/8" diameter hole is provided opposite the Handhole.

**7"+ Butt Diameters** - Reinforced, 4" x 6" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. Reinforced Frame will contain a tapped 3/8"-16NC Grounding Provision.

### Embed Detail

Direct Buried Pole bottom section on 6"+ butt diameter poles will be partially flattened into an anti-rotational, oval cross section. Wire access will be provided 24" below ground line. Soil conditions vary by site. Foundation requirements should be determined by a qualified Structural Engineer with knowledge of jobsite soil conditions.

### Vibration Damper

When determined necessary by Hapco, a Vibration Damper will be factory-installed inside the pole shaft. Customer specification of the damper is available.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**Pole**

Shaft and arm will be constructed of seamless extruded tube of 6063 Aluminum Alloy per the requirements of ASTM B221. The shaft assembly shall be full-length heat treated to produce a T6 temper.

**Handhole**

**6" Butt Diameter** - Reinforced, 3" x 5" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. A Grounding Provision incorporating a 3/8" diameter hole is provided opposite the Handhole.

**7"+ Butt Diameters** - Reinforced, 4" x 6" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. Reinforced Frame will contain a tapped 3/8"-16NC Grounding Provision.

**Embed Detail**

Direct Buried Pole bottom section on 6"+ butt diameter poles will be partially flattened into an anti-rotational, oval cross section. Wire access will be provided 24" below ground line. Soil conditions vary by site. Foundation requirements should be determined by a qualified Structural Engineer with knowledge of jobsite soil conditions.

**Vibration Damper**

When determined necessary by Hapco, a Vibration Damper will be factory-installed inside the pole shaft. Customer specification of the damper is available.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**Pole**

Shaft and arm will be constructed of seamless extruded tube of 6063 Aluminum Alloy per the requirements of ASTM B221. The shaft assembly shall be full-length heat treated to produce a T6 temper.

**Handhole**

**6" Butt Diameter** - Reinforced, 3" x 5" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. A Grounding Provision incorporating a 3/8" diameter hole is provided opposite the Handhole.

**7"+ Butt Diameters** - Reinforced, 4" x 6" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. Reinforced Frame will contain a tapped 3/8"-16NC Grounding Provision.

**Embed Detail**

Direct Buried Pole bottom section on 6"+ butt diameter poles will be partially flattened into an anti-rotational, oval cross section. Wire access will be provided 24" below ground line. Soil conditions vary by site. Foundation requirements should be determined by a qualified Structural Engineer with knowledge of jobsite soil conditions.

**Vibration Damper**

When determined necessary by Hapco, a Vibration Damper will be factory-installed inside the pole shaft. Customer specification of the damper is available.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

C and D Dimensions in Inches

**Pole**

Shaft and arm will be constructed of seamless extruded tube of 6063 Aluminum Alloy per the requirements of ASTM B221. The shaft assembly shall be full-length heat treated to produce a T6 temper.

**Handhole**

**6" Butt Diameter** - Reinforced, 3" x 5" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. A Grounding Provision incorporating a 3/8" diameter hole is provided opposite the Handhole.

**7"+ Butt Diameters** - Reinforced, 4" x 6" curved Cast Aluminum Frame (Alloy 356-T6) with Aluminum Door and two (2) SS Hex Head Screws. Reinforced Frame will contain a tapped 3/8"-16NC Grounding Provision.

**Embed Detail**

Direct Buried Pole bottom section on 6"+ butt diameter poles will be partially flattened into an anti-rotational, oval cross section. Wire access will be provided 24" below ground line. Soil conditions vary by site. Foundation requirements should be determined by a qualified Structural Engineer with knowledge of jobsite soil conditions.

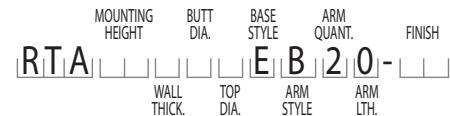

**Vibration Damper**

When determined necessary by Hapco, a Vibration Damper will be factory-installed inside the pole shaft. Customer specification of the damper is available.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

Satin Aluminum or Powder Coated Finish per Customer Specification.

### EPA Notes:

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

**EPA Notes:**

Effective Projected Area (EPA) in square feet. EPA's calculated using wind velocity (mph) indicated in accordance with 2009 AASHTO LTS-5 using a 25 year design life. Maximum EPA is based on the luminaire weight shown. Increased luminaire weight may reduce the maximum EPA. If weight is exceeded, or if other design life or code is required, please consult the factory.

# Standard Pole Modifications

## Handholes

Standard handhole modifications are detailed below. Custom handhole options may be available (*contact Hapco for additional information*).

### Modification No. 151

#### 4" x 6" Reinforced Handhole

This industry-standard handhole size is included as a standard in many of the poles in this catalog. The opening is oval in shape and measures 4" x 6", with the major dimension along the vertical axis. The hole in the shaft wall is reinforced with a frame of aluminum alloy 356-T6, which projects slightly through the wall and is completely joined to the shaft with a fillet weld, the minimum size of which is 5/16". The opening is protected by a snug-fitting cover attached by means of two (2) Stainless Steel hex head screws. The external contour of the reinforcing frame and cover, although projecting slightly for sound welding, is curved to conform to the roundness of the shaft. The cover has a surface finish which is identical to that of the shaft. The standard location of the handhole is centered 18" above the bottom of the shaft and will be located 90 degrees clockwise from the plane of the bracket, as viewed from above.

### Modification No. 152

#### 4" x 8" Reinforced Handhole

Except for the size, the specification are the same as the above. Note: This size handhole cannot be furnished with poles having a shaft diameter less than 7".

### Modification No. 153

#### 3" x 5" Reinforced Handhole

This modification is used on 6" butt diameter poles only. Except for the dimensions and the fact that the frame is fastened to the shaft by two fillet welds, the specifications are the same as Modification No. 151.

### Modification No. 154

#### 3" X 5" Unreinforced Handhole

This is an oval hole, 3" x 5", cut in the pole shaft. It is provided with a curved cover to fit the exterior surface of the pole. The cover is attached with two self-tapping stainless steel Phillips-head screws. It is used in applications where strength requirements permit, such as in pedestal poles. The center of the handhole is usually 18" above the ground line.

### Modification No. 155

#### 2" x 4" Unreinforced Handhole -

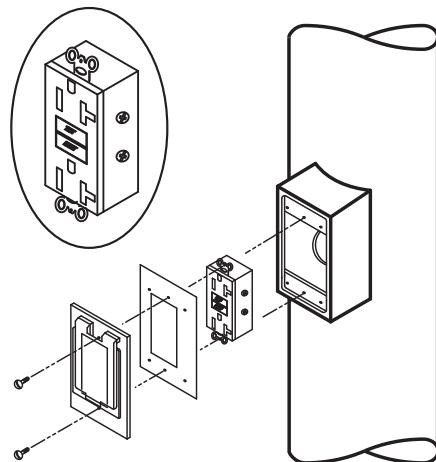

Except for the size, the specifications are the same as Modification No. 154.

### Receptacle Outlet Boxes

Receptacle Outlets Boxes are available with and without receptacles to provide current for external circuits.

The Receptacle Outlet is an assembly similar in size and dimension to the standard "FS" outlet box. It is made of cast-aluminum Alloy 43 and is completely welded to the shaft around the perimeter of the box. When ordered without the receptacle, the Modification No. 183 box is furnished with a blank cover attached with four machine screws.

Modification No. 185 contains a gasketed cover attached to the box with two machine screws. It incorporates a spring-actuated access door and a double three-wire, G.F.C.I. receptacle rated at 20 amperes, 125 volts, weather resistant (WR) rated and UL approved.

### Modification No. 185

With Duplex G.F.C.I. Receptacle

### Slipfitter Tenon (for Brackets)

Tenons are available for luminaires which cannot be used with the standard Hapco 2" pipe-size tenon. The 1 1/4" pipe-size tenon is 6" long and is welded into the end of the bracket arm with a circumferential weld. Custom tenon options are available (*contact Hapco for additional information*).

# Vibration Isolating Arm

## Vibration Isolating Arm

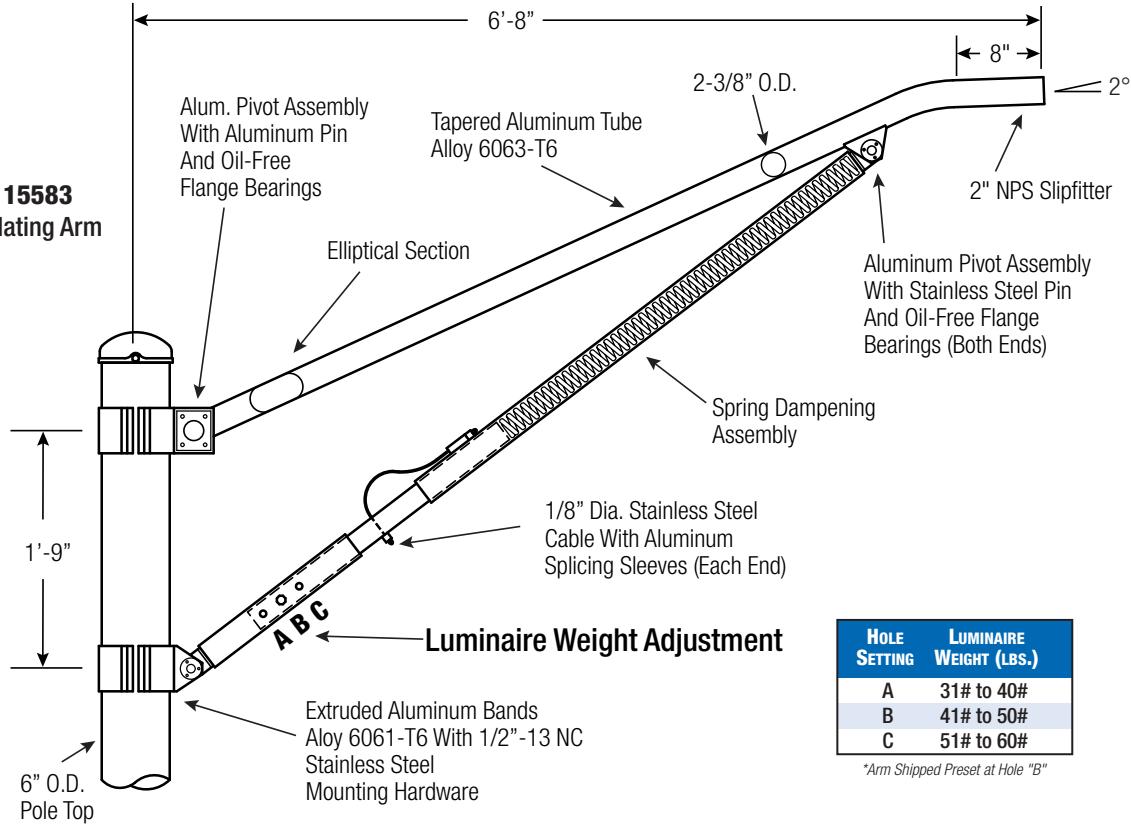

Traffic crossing bridges and overpasses can set up vibrations that can literally shake apart lighting fixtures mounted on these structures. Premature lamp failure is the most common result. Fixtures or brackets can also tear loose and, in some cases, light fixtures can fall off their bracket. Early replacement of these kinds of lighting systems before their expected life-cycle can quickly add up to significant expenditures.

At Hapco, we have responded to this challenge by developing a patented spring suspension and friction damping system that isolates the luminaire from the vertical vibration of the pole. In tests, our damped arm significantly reduces free vibration - from 110 cycles for a standard, non-damping arm to 10 cycles for the damped system.

Other lab and field tests support these results, including findings from a specific installation site that has been monitored from December of 1994. For a report on these findings or any additional information about the Vibration Isolating Arm, please contact Hapco.

# Wind-Induced Vibration

## Wind-Induced Vibration

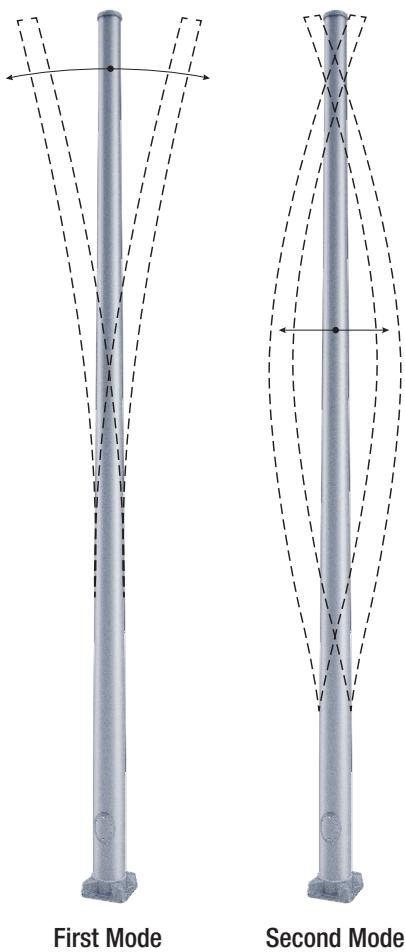

There are two common types of wind-induced vibration observed in poles... **First Mode Vibration** and **Second Mode Vibration**.

### First Mode Vibration

In first mode vibration, sometimes referred to as sway, the maximum deflection occurs at the top of the pole. First mode oscillation typically occurs at a low frequency of approximately one cycle per second. Normal deflection of this shape usually is not harmful to the pole or luminaire, but first mode oscillating vibration will cause damage and failure.

### Second Mode Vibration

Second mode vibration can be the most damaging form of vibration. It occurs approximately at the midpoint of the pole with the deflection off center equal from *side-to-side*. It occurs at a higher frequency, typically three to six cycles per second. Second mode vibration occurs when the wind synchronizes with the pole's natural frequency of vibration. This is known as resonance. As the steady low level wind moves past the pole, vortices are shed alternately from either side of the structural shaft causing displacement oscillations in a direction perpendicular to that of the wind. Vortices are a swirling motion or pattern of the wind. The most serious situation arises when the vortex-shedding frequency synchronizes with the natural period of vibration in the pole, which can ultimately fatigue the pole to structural failure.

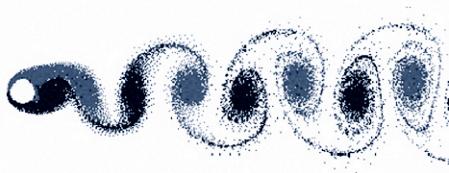

### Variables

Each job site has different variables that may contribute to structural fatigue vibration. These pole variables should be taken into consideration, along with environmental and structural factors, to determine if the potential for vibration exists.

- **Total Load (EPA) and Shaft Length** – Light loading, less than 2.0 EPA, and shaft lengths at or above 25 feet can significantly increase the probability of destructive vibration.
- **Shape** – Straight Square Poles historically experience more effects of destructive first mode vibration. Round poles historically experience more effects of destructive second mode vibration. However, no shape is exempt.
- **Installation Procedures** – Poles are designed to carry a load, and a pole cannot be installed before the luminaire is mounted. Never install a pole without the intended luminaire in place.
- **Parking Deck Installation** – Influences from surrounding structures and transferred vibration generated by moving vehicles.
- **Near or at Airports** – Little or no objects to break the wind currents and the presence of turbulence created by aircraft.
- **Bridge Installation** – Little or no objects to break the wind currents and the transfer of vibration generated by moving vehicles.
- **Mountain Foothill Areas** – Air currents traveling from the higher elevations can create steady damaging winds.
- **Large Expanse of Flat Ground or Water** – In tandem with little or no structures, the wind currents will not be disrupted which sets up the possibility for low steady winds and destructive vibration.
- **Steady Low Level Winds** – The upper Midwest and Plains States have shown this trend.

*This is not a complete list. Other factors can influence the effects of wind.*

Vortex Shedding

Wind induced vibration can be caused by steady, relatively low-speed wind (10-30 mph), by topography and by the structure to which the pole is mounted or nearby structures. Destructive vibration is not an indication of substandard material, workmanship or design of pole.

### Light Pole Design

Pole design requires consideration of field conditions such as wind speed (*sustained/gusts*), pole height, appendages and local conditions. Wind induced vibration is a local, site-specific condition that may be overlooked by those selecting a pole because it is difficult to predict accurately. Poles which perform satisfactorily in many installations all across the country may experience destructive vibration at a select location for no apparent reason. Typically, poles are designed or selected based on AASHTO (*American Association of State Highway and Transportation Officials*) criteria. The standards and codes take into account direct wind pressures on the pole and luminaire, the associated bending, shear, axial and torsional stresses on the pole, secondary moment effects (*the pole and fixture being off center of the pole base when the wind deflects the pole*) and the effect of heat on the base material in the area adjacent to the weld.

# Vibration Dampers

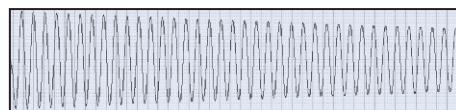

**Hapco is the industry-recognized pioneer on the research of wind induced vibration in aluminum poles. Our decades of research and testing has led to several patents in this category, giving Hapco Engineers the knowledge and background to assure our customers the safest, longest lasting pole designs.**

We have learned from experience that poles supporting certain types of post-top mounted fixtures are more susceptible to first and second mode vibration. The rectangular or "shoebox" shaped luminaires, for example, seem to encourage second mode vibration, while more aerodynamic lightweight fixtures encourage first mode vibration. Any oscillation should be dealt with as soon as it becomes apparent to prevent damage to the pole or luminaire.

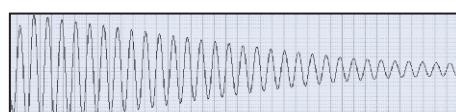

## Hapco Damper Solutions

To minimize the effects of first or second mode vibration, Hapco has developed dampers which very effectively quell wind induced vibration of lighting poles.

### First Mode Damper

Hapco's patented First Mode Vibration Damper is field installed at the top of square poles. This damper very effectively reduces first mode vibration of square lighting poles. Due to potential vibration fatigue issues that can be associated with moderate wind conditions, First Mode Dampers are recommended for square poles with mounting heights greater than 25' and for square poles with light loading fixtures less than 2.0 EPA. Fatigue related pole failures are not an indication of substandard material, workmanship or design of the pole and is not covered under Hapco's standard warranty.

### Second Mode Damper

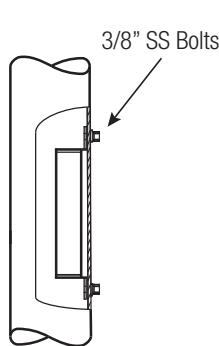

The Hapco Second Mode Damper was awarded the industry's first patent in the vibration damping category in 1972. It is attached to the pole at approximately the midpoint of the pole, and can be factory bolted inside the pole or field mounted on the inside or outside of an existing pole.

Based on past experience, some Hapco poles include factory-installed Second Mode Vibration Dampers as a standard component. If the poles you intend to order are to be bridge mounted, used as camera poles, or may be subject to unusual site conditions, wide open terrain, steady or high energy prevailing winds, or other site conditions as mentioned, please make Hapco aware of these conditions. Or, if your installed poles are exhibiting oscillation, contact Hapco to pursue a damping solution that may include installing a Hapco Second Mode Damper on the poles.

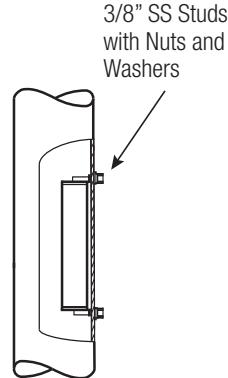

*Locations with high average wind speeds are more prone to pole vibration problems than locations with high maximum wind speeds. Areas of high average wind speeds can be identified on the U.S. Department of Energy Residential Scale 30 Meter Wind Map which can be accessed at the U.S. Department of Energy website ([http://apps2.eere.energy.gov/wind/winexchange/windmaps/residential\\_scale.asp](http://apps2.eere.energy.gov/wind/winexchange/windmaps/residential_scale.asp)).*

#### Notes:

- Each catalog number refers to a complete set of bolts. Each bolt will include one nut, one lockwasher, and one flatwasher (*all hardware components of galvanized steel*).
- To use two nuts per bolt for leveling, change the suffix to "-002" (*Example 271-002*). "-002" Kits will contain two nuts, two flatwashers, and one lockwasher per bolt. If leveling nuts are used, the pole base should be directly supported in full contact by a high quality, structural, non-shrink grout with a minimum 28 day compressive strength of 8,000 psi. All bolt projections shown in this catalog are for single nut applications. Different amounts of bolt projection will be required for use with leveling nuts. NOTE: Hapco does not recommend double nut installations (*See #4*), and stilted the pole base with leveling nuts should never be used with breakaway devices. Leveling nuts interfere with the device's proper performance, and if so mounted, Hapco will void certification that these devices meet AASHTO breakaway requirements.
- For Double Nut Kits (**Hardware Only, No Bolt**), specify "DN" (*Example 271-001DN*).
- Hapco recommends leveling shims in lieu of leveling nuts. No grouting is required with leveling shims. Order Part # 51432-001 (3-1/8"W x 3-1/2"L x 1/16"H).
- Contact Hapco Customer Service for information on Anchor Bolt options (*SS – Stainless Steel, FG – Fully Galvanized, etc.*).

***Hapco Aluminum, a sustainable material  
for now and the future!***

## **Hapco Aluminum - The Green Choice**

Hapco Aluminum provides an environmentally responsible choice of material and approach with the burgeoning green movement, allowing specifiers to aggressively pursue a design based upon sustainable principles.

Hapco Aluminum resists the ravages of time, temperature, corrosion, humidity, and warping, creating an incredibly long life cycle when compared to alternative materials. This results in a far lower environmental impact through reduced material replacement energy.

Our products are engineered to be efficiently and durably built using materials and processes that are kind to our environment. Aluminum production, unlike the galvanization process of steel which emits zinc chloride and ammonium chloride into the atmosphere, has a low impact on the environment, making it especially appealing when both environmental and economic criteria are considered.

The longevity and durability of aluminum pole products manufactured by Hapco can be validated by our industry-leading **Lifetime Warranty** on **Aluminum Pole Assemblies**, making Hapco Aluminum "**The Green Choice**" for today's environmentally-conscious designer.

- *Aluminum is 100% recyclable. In fact, 70% of aluminum produced since the year 1886 is still in use today.*
- *Recycling aluminum saves 95% of the energy it would take to produce new material from Bauxite Ore.*
- *Every ton of recycled aluminum saves 4 tons of the raw Bauxite required to produce new aluminum.*
- *Using recycled aluminum in place of raw materials reduces air pollution by 95% and water consumption by 97%.*
- *Aluminum is naturally corrosion-resistant, eliminating the use of toxic chemicals to maintain its appearance.*
- *Aluminum recycling benefits present and future generations by conserving energy and other natural resources.*
